

Lowball Poker Goal

Last Updated Tuesday, 03 June 2008

Lowball poker strategy is a complex subject. The object of the lowball poker game is to make the worse possible hand. This game can be played with a maximum of six players, one player is supposed to post the big blind and the other is supposed to post the small blind and then a total of five cards are dealt to every player. There is a going to be a round of betting after each street card deals, which will include each player to either having to bet, raise or fold, following which there is going to be a draw, where one will allowed to replace, 1 to a maximum of 5 cards per casino rules. There is an option to much in lowball poker games most of the time.

The complexity of the lowball poker game lies in that the aces are considered high in 2-7, game and the straights and flushes count against the hand. The best possible hand is 23457 in the deuce to 7. 23456 are considered a straight in deuce to seven games and thus it is considered to be bad hand. Lowball poker is also played Ace to five, ace to six, deuce to seven, deuce to six and in many other variations. In fact face cards are not desirable in lowball poker games, they kill the winning chances most of the time. Lowball poker has a good number of presence in the online casino industry and is reputed in its own circle of fans for all its variants. Though not played as widely as holdem or other stud variations a considerable number of players still show interest in lowball poker. Any one that has ever wanted to try Lowball poker should be able to find lots of risk free ways to try it. All one will have to do is to make a free download, brush up on the rules for the particular lowball poker variant and get ready to win or loose. Lowball poker is played with and without wild cards. Obviously, the strategy for lowball poker varies based on lowball variant, the betting structure and the usage and non-usage of wild cards. The Lowball Poker strategy as already stated gets complicated with wild cards. To produce the probability results for wild cards there are several software available to calculate probabilities per replacement value for wild cards and such should be an easy way to arrive at probabilities with wild cards while at play rather than make all the lowball poker math mentally.
